

Style Strength Posture

TRUPOS **Ultra**

Looks good - Feels good

Add contemporary style to your learning space with the Trupos Ultra. The Ultra is a strong, durable student chair promoting optimal student posture.

"The cantilever design facilitates improved postural control, comfort and more appropriate positioning to the student desk.

The depth and contoured shape of the back support provides optimal lumbar support."¹

Available in four standard sizes. Colours include Red, Slate and Black. Further colours are available with volume purchases. Also available with a padded seat.

Made in Australia by Batger Furniture Tested by Furntech AFRDI to AS/NZS 4610.2:1999 GECA approved

Note: The above sizes and heights are recommendations only. If adding to current furniture please check current measurements.

The **Ultra** Range

Tall or small, one size fits all with the Ultra Gaslift. Offering a robust gaslift strut, this chair ensures correct knee angle for all students. It encourages good posture throughout learning activities and aids in the reduction of muscular fatigue and straining.

Options

- Glides (as opposed to castors) to limit chair movement
- Padded seat for extra comfort
- Drafting height available to increase to drafting / bar height

TRUPOS Ultra

Improved **posture**

Good seated posture is essential in all work/study/learning environments to reduce both physical and mental fatigue.

Through improved posture, optimum respiratory function is possible. In a learning environment, appropriate respiratory function is necessary to maintain concentration, increase alertness and reduce mental fatigue.

The contoured seat of the Ultra provides excellent support and control - ensuring good posture. The padded version of the seat improves comfort yet maintains an optimal position with the back support. This results in excellent postural control for students.

The depth of contour of the back support and ergonomic shape promotes improved lumbar support and perfect upright posture. This aids in reducing fatigue and physical strain on the back and neck, creating excellent posture in the base of the spine, the mid back and into the neck.
